Part 54

Virgin Islands of the United States

Area Data

ACKNOWLEDGMENTS

This report was prepared in the Agriculture Division. Many divisions participated in the various activities of the 1987 Agriculture Census of the Virgin Islands: Economic Programming prepared the computer programs, designed the computer system, and installed the hardware; Field performed the clerical processing; Geography developed the field maps; Data Preparation assisted with the preparation of enumeration materials; Administrative Services provided the forms design and other administrative services; Publication Services contributed in publication, planning and design, editorial reviews, composition, and printing procurement; data collection was under the direction of Eric Dawson, Commissioner of Economic Development and

Agriculture of the Virgin Islands, under a special agreement with the Census Bureau. The data collection activity was conducted by census enumerators under the supervision of **Godfrey Gordon**. Project Leader.

Representatives of the Government of the Virgin Islands made significant recommendations which helped establish data content and provided valuable advice during the planning stages of the census.

Special tribute is paid to the many farm and ranch operators who furnished the information requested. Only through their cooperation was it possible to collect and publish the data in this report.

If there are any questions concerning the statistics in this report call:

HISTORY

The 1987 census is the 11th census of agriculture of the Virgin Islands. The first, taken in 1917, was a special census authorized by the Secretary of Commerce. The next agriculture census was taken in 1930 in conjunction with the decennial census, a practice that continued every 10 years through 1960. The 1964 Census of Agriculture was the first quinquennial (5-year) census to be taken in the Virgin Islands. For the guinguennial census of 1969, the data were collected in 1970 in conjunction with the 1970 Censuses of Population and Housing. The 1974 census was taken independently of any other censuses. In 1976, Congress authorized the census of agriculture to be taken for 1978 and 1982 to adjust the data reference year to coincide with the 1982 Economic Censuses covering manufacturing, mining, construction, retail trade, wholesale trade, service industries, and selected transportation activities. After 1982, the agriculture census reverted to a 5-year cycle to be taken covering years ending in "2" and "7."

USES OF THE CENSUS

The census of agriculture is the recognized source of statistics about the Virgin Island's agricultural production and the only source of consistent, comparable data at the island level. Census statistics are used to measure agricultural production and to identify trends in an ever changing agricultural sector. Many local programs use census data as a benchmark for designing and evaluating surveys. Private industry uses census statistics to provide a more effective production and distribution system for the agricultural community.

AUTHORITY AND AREA COVERED

The 1987 Census of Agriculture was taken in accordance with the provisions of Title 13, United States Code. Sections 142(a) and 191 provide for a census of agriculture every 5 years in each State, the District of Columbia, Puerto Rico, Guam, and the Virgin Islands of the United States. The census data for the Virgin Islands may be collected by the Governor or a representative from his/her staff to act as census supervisor, in accordance with a Memorandum of Agreement prescribed or approved by the Director of the Bureau of the Census.

FARM DEFINITION

The data presented in this report relate to places qualifying as farms for census purposes. For the 1987 Census of Agriculture in the Virgin Islands, a farm was defined as any place from which \$100 or more of agricultural products were sold or normally would have been sold during the census year. This is a definitional change from 1982. For 1982, a farm was defined as a "place" of 3 acres or more on which any field or forage crops were harvested or vegetables were harvested for sale during the 12-month period between July 1, 1982, and June 30, 1983, or on which there was a combined total of 10 or more fruit or nut trees or plants, any livestock, or 10 or more poultry at the time of enumeration. Places of less than 3 acres were counted as farms if their sales of agricultural products between July 1, 1982, and June 30, 1983, amounted to at least \$100, or if they could normally be expected to produce agricultural products in sufficient quantity to provide sales amounting to at least \$100.

COMPARABILITY OF DATA

Comparability of data from the 1987 Census of Agriculture in the Virgin Islands has been slightly affected by improvements in the coverage of the operators' list and improved techniques of training enumerators. In general, data from the 1987 census are comparable with those of previous censuses.

TABULAR PRESENTATION

The detailed tables in this report give totals for St. Croix, St. John, St. Thomas, and for the Virgin Islands, as a whole.

CENSUS DISCLOSURE RULES

In keeping with the provisions of Title 13, United States Code, no data are published that would disclose the operations of an individual farm. However, the number of farms in a given size category or other classification is not considered a disclosure, so this information may be given even though other information is withheld.

DEFINITIONS AND EXPLANATIONS

Appendix A includes definitions and explanations of selected terms used in the tables. Appendix B displays a bridge table of selected items with the 1987 census data by the new definition, and the 1982 data by both the 1987 definition and the 1982 definition. The 1987 report form is shown in appendix C.

DOLLAR VALUES

All dollar values presented in this report are expressed in current dollars, i.e., 1987 data are expressed in 1987 dollars and 1982 data in 1982 dollars. The dollar values have not been adjusted for changes in price levels between census years.

INVENTORIES, PRODUCTION, AND SALES DATA

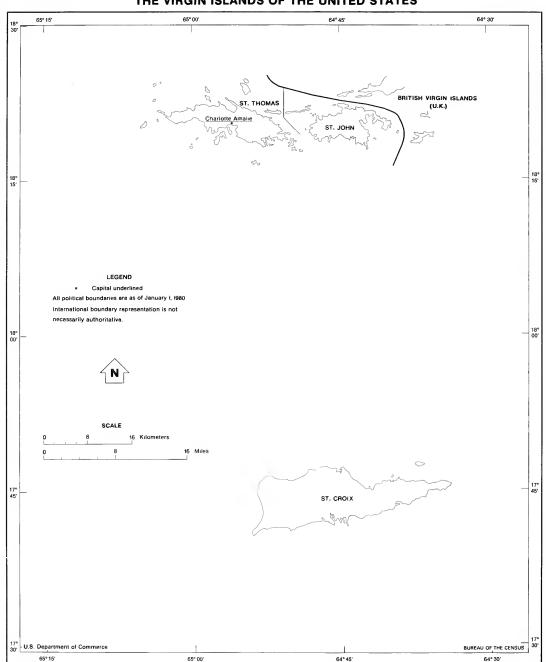

Inventories of livestock, poultry, and machinery and equipment are the number on hand at the time of enumeration. Crop production, crop and livestock sales, and expense data are for the 12-month period between July 1, 1987, and June 30, 1988.

ABBREVIATIONS AND SYMBOLS

The following abbreviations and symbols are used throughout the tables:

- Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half of the unit shown.
- (NA) Not available.

TAKING THE CENSUS

Report Form

The report form for the 1987 Census of Agriculture was prepared by the Outlying Areas Branch of the Agriculture Division, Bureau of the Census, in cooperation with the Department of Economic Development and Agriculture of the Virgin Islands. The questions were based on current requirements for agricultural information and, to some extent, on the desire for comparability with earlier censuses.

The only modification made to the 1987 census report form was the elimination of the question concerning whether or not the farm was located on a hard surface road.

Training Program

The project manager, crew leader, and enumerators employed for the census in the Virgin Islands received special training in accordance with instructions prepared by the Bureau of the Census. The training included practice in interviewing, filling out the report form, and detailed discussion of the enumerator's instructions.

Method of Enumeration

As in the previous censuses of the Virgin Islands, the direct enumeration procedure was used in the 1987 Census of Agriculture. The statistics in this report are data collected from farm operators during the period from July to the middle of August 1988. For the enumeration, the Virgin Islands were divided into six Enumeration Districts (ED's) and each district was clearly delineated on special ED maps prepared for the census.

Each enumerator was assigned an ED and given a map of the area to be enumerated. The enumerators were also given a list of the persons from whom a report form had been obtained in the 1982 Census of Agriculture as well as other persons known to be conducting farm operations. The enumerators were required to check all persons on their list.

Enumerators were also instructed to ask enough questions about tracts of land on which no one lived to determine whether agricultural data should be collected from the person in charge of the land. This procedure was designed to assure the complete coverage of all land used for agriculture, whether by an individual, a corporation, or an institution.

To avoid enumeration of the same place more than once, rules were established whereby enumerators could determine who was responsible for completing a report form for a given place. If the person in charge of an agricultural operation lived outside of the ED in which the land under his/her control was located, the enumerator assigned to the ED in which the operator resided was responsible for completing his/her report form. If a place was partly in one ED and partly in another, the enumerator for the ED in which the operator lived was responsible for completing the report form to include all the land the person operated in the Virgin Islands, regardless of the ED.

OFFICE PROCESSING

The office processing was done in the Agriculture Division at the Bureau of the Census. Each report form was edited and coded prior to being data keyed. Report forms obtained for places not meeting the census farm definition criteria were voided. The remaining report forms were examined for accuracy, consistency, and completeness. Enumerators' errors in computations and in units of measures, inconsistencies, and misplaced entries were corrected. Missing information was derived and entered on incomplete reports on the basis of related information on the same report form or from report forms for nearby farms of similar type and size.

After all the forms had been edited and coded, the data were keyed and subjected to a thorough computer edit analysis. Any inconsistencies were reviewed, corrected, and keyed to a correction file. The corrected data were then tabulated by the computer and printed out for review.

Subject matter specialists reviewed the computer tabulations for reasonableness and consistency. Corrections were made on the basis of a reexamination of the original report forms. The data were then retabulated and a printout was provided so that the data tables could be prepared for final publication.

DEFINITIONS AND EXPLANATIONS

The following definitions and explanations relate to items that are considered to be inadequately described in

the tables. Most of the definitions are from the instructions given to enumerators. For an exact wording of the questions and instructions on the report form, see the report form in appendix C.

Farm operator—The term "operator" designates a person who operates a farm, either by doing the work himself/herself or by directly supervising the work. The operator may be the owner, a member of the owner's household, a hired manager, or a tenant, renter, or share-cropper. If the operator rents land to others or has land worked on shares by others, he/she is considered the operator only of the land retained for his/her own operation. In the case of partnership, only one partner is counted as an operator. By definition, the number of operators is the same as the number of farms.

Farm or operators reporting—Figures for "farms reporting" or "operators reporting" represent the number of farms, or operators reporting the specified item. The difference between the total number of farms and the number of farms reporting a particular item represents the number of farms not having that item, provided a correct report was received for all farms.

Land in farms—All data relating to land tenure and land in farms refer only to land located in the Virgin Islands and the situation existing at the time of enumeration. The land included in each farm was determined from the answers to questions 1 through 5 in section 2 of the report form which relate to land tenure (see app. C). The acres reported as owned, rented from others, or worked on shares for others, were added together, and then the acres rented to others or worked on shares by others were subtracted from that sum. The results represent "Land in farms." If acres are operated by a hired or salaried manager, they become the total acres in the place and represent "Land in farms." (See "Land managed" below).

Although the area designated land in farms consists primarily of agricultural land—i.e., land used for crops, pasture, or grazing—it also includes land not actually under cultivation nor used for pasture or grazing. For example, woodland and wasteland owned or rented from others was included as land in farms unless reports indicated it was being held for nonagricultural purposes, such as recreational or for timber.

Land owned—This includes all land that the operator or his/her spouse held under title, purchase contract, homestead law, or as heir or trustee of an undivided estate at the time of enumeration.

Land rented from others—This includes not only land the operator rented or leased from others, but also land worked on shares for others or land occupied rent free.

Land managed—This includes all tracts of land managed for an employer by a person paid a salary or wages. A hired manager is the operator of the managed

land, since he/she is responsible for the agricultural operations and frequently supervises others in performing those operations. If a hired manager also had agricultural operations of his/her own, he/she was asked to report it on a separate report form from the managed operations.

Land rented to others—This includes all land that the operator rented to others and all land assigned to others on shares or rent free. For the most part, land rented to others represents agricultural land, but it also includes land rented for residential or other purposes. The tenant is considered to be the operator of land leased, rented, or worked on shares, even though his/her landlord may supervise the operations. The landlord is considered to be the operator of only that portion of the land not assigned to tenants.

Land use—Land in farms at the time of enumeration is categorized according to the way it was used during the 12-month period between July 1, 1987, and June 30, 1988. The land uses described are mutually exclusive in that each acre of land is counted only once even though it may have had more than one use during the year.

Harvested cropland—This refers to all land from which any crop was harvested during the 12-month period, whether for home use or sale. It also includes land in field crops that were grazed when mature or almost mature, and land in nonbearing fruit or nut trees and plants. Land from which two or more crops were harvested was to be counted only once. Land from which crops were harvested and which was also used for other purposes, either before or after the crops were harvested, was to be reported as cropland harvested without regard to the other uses.

Other cropland-This includes cropland from which no crop was harvested between July 1, 1987, and June 30. 1988, but which was occupied by growing crops, except fruit or nut trees, intended for harvest in 1988 or later. It also includes cropland intended for harvest, but not actually harvested because of complete crop failure, low prices, labor shortage, or other reasons; land that had been plowed and could be plowed again without first being cleared of brush, but that lay idle throughout July 1, 1987, to June 30, 1988; and land used for soil-improvement crops. Other cropland also includes land which was used only for pasture or grazing which the operator could have used for crops without additional clearing or irrigating. Enumerators were instructed to exclude any land pastured after a crop was harvested.

Pasture or grazing land—This refers to all land used for pasture or grazing between July 1, 1987, to June 30, 1988, except cropland. It includes all woodland where livestock pastured or grazed.

Woodland not pastured—This includes all woodland that was not used for pasture or grazing between July 1, 1987, to June 30, 1988. In the enumerator's reference book, "woodland" was defined as "all farm wood lots or timber tracts, natural or planted; and...cutover land with young growth which has or will have value as wood or timber."

Other land—This refers to all land not included in the other land use classifications, such as house and other building lots, lanes, roads, ditches, and land area of ponds and wasteland.

Type of holding—Holdings are classified according to whether they were producing mainly for home consumption or mainly for sale. Those from which more than 50 percent of the agricultural output is consumed by the holder's household are classified as producing mainly for home consumption. Those from which 50 percent or more of the agricultural output is sold are classified as mainly for sale. Holdings producing mainly for sale are further classified according to their most important activity. Each holding named means that 50 percent or more of the value of sales was from the item named. The holdings are: vegetable, field and forage crop, fruit and nut, dairy, livestock, poultry, or nursery. The remaining two categories of holdings are used when the above do not apply.

Mixed holding—This is one on which none of the above items accounts for 50 percent or more of the value of sales.

Other holding—This is one that does not belong to any of the previous groups.

Crops harvested—The 1987 report form was similar to the report forms used in previous censuses. It provided for the collection of data for specified field crops, vegetables, fruits, and nuts harvested on each farm. Inquiries were included for the most commonly grown crops in the Virgin Islands and space was provided to write in those less frequently produced.

The units of measure for reporting quantities of some crops have varied from one census to another. The aim has been to permit reporting in the units of measure currently in use. The quantities harvested for each crop are expressed in the units of measure given on the 1987 report form.

Forage, field, and vegetable crops—The area for individual crops harvested was obtained for forage, field, and vegetable crops in acres and 10th of acres. When two or more crops, or two or more plantings of the same crop, were harvested from the same land, the area was to be reported for each separate crop or planting. Total quantities of each forage and field crop harvested were to be reported, whether the crops were

for home use or for sale. Also, total quantities of each crop sold were to be reported. The acreage reported for vegetables relates only to the acreage harvested.

Fruits and nuts—The figures for acres and for number of trees and plants relate to the time of enumeration.

Value of products sold—Data for value of products sold were obtained for each type of crop, fruit, livestock, etc., sold from the farm. The gross value of quantities sold was to be reported regardless of who did the selling or shared in the receipts. Crops given to a landlord and crops produced on institutional farms for use by inmates of the institution were to be considered as sold.

Livestock and poultry—Inventory data for livestock and poultry relate to the number on hand at the time of enumeration. All livestock and poultry were to be enumerated on the place where they were at the time of enumeration regardless of who owned them. Livestock on unfenced land were to be reported as being on the place identified as the headquarters of the person who had control over them.

Sales data for livestock, milk, and poultry products relate to the 12-month period between July 1, 1987, and June 30, 1988. Enumerators were instructed to report total quantities and gross value of sales regardless of who did the selling or shared in the receipts. Products given by a tenant to a landlord and products taken from an institutional farm for use by inmates of the institutional farm were to be considered as sold.

Selected farm expenses—The 1987 report form contained questions on six types of farm expenses incurred between July 1, 1987, and June 30, 1988, whether made by the farm operator, his/her landlord, or both. A farm operator who rented part of his/her land to others reported only the expenses on the land he/she operated.

Machine hire and customwork—Expenses for machine hire and customwork relate to tractor hire, plowing, and spraying. Any amount spent for the labor involved is considered to be part of the expense. The costs of hauling, trucking, or of exchange work without pay are omitted.

Hired farm labor—Expenses for hired farm labor include total cash payments made between July 1, 1987, and June 30, 1988, to family members and others for farm labor. Payments to persons supplied by a contractor or a cooperative organization and paid directly by them or by the person in charge are also included. Payments are excluded for housework, contract construction work, customwork, and repair and installation work performed by persons specifically employed for the work.

Purchases of feed—Expenses for feed for livestock and poultry include total cash payments made between July 1, 1987, to June 30, 1988, for pasture used, salt,

concentrates, mineral supplements, grain, hay, mill-feeds, and any other items purchased for feeding live-stock and poultry on the place. Expenses made for the grinding and mixing of feed and the estimated cost of items furnished to the operator by a landlord or others are also included. Payments made by a tenant to a landlord for feed grown on the tenant's farm are excluded.

Purchases of insecticides, fungicides, and herbicides—This item relates to total cash expenses between July 1, 1987, and June 30, 1988, for all chemicals, sprays, dusts, etc., used to control weeds, pests, insects, or disease on crops and livestock.

Purchases of fertilizers and manure—These expenses include the total amount spent between July 1, 1987, and June 30, 1988, for manure and commercial fertilizers of all kinds for use on the farm.

Purchases of livestock and poultry—This item includes all cash expenses for livestock and poultry purchased between July 1, 1987, to June 30, 1988, for the place. The cost of livestock and poultry bought and resold within 30 days is not included.

Equipment and facilities—Operators were asked to report the number of tractors, motortrucks, and automobiles on their farms at the time of enumeration, regardless of ownership. Items that were temporarily out of order were to be included, but not those that were worn out. Tractors include all wheel and tracklaying (crawlers), garden, and homemade. Motortrucks include pickup trucks, truck-trailer combinations, jeeps, and station wagons if they were used primarily as trucks. Automobiles include jeeps and station wagons if they were used primarily as passenger cars. Data obtained in the 1987 census for the number of tractors, motortrucks, and automobiles on farms are comparable with those presented for earlier census years.

Since the 1960 census, data were obtained on presence or absence of electricity and piped running water on the farm. These facilities were considered to be on the farm if they were available anywhere on the place, whether or not in the operator's dwelling. "Piped running water" was defined as "water carried in pipelines by a pressure system or by gravity flow from a natural or an artificial source."

Farm wells included all holes or pits made by excavation to reach a supply of water for irrigation, watering livestock, and other purposes. Farm ponds are not included.

Operator characteristics—Data were obtained to classify the operators according to six characteristics.

 Residence of operator—Operators were classified by residence according to whether or not they lived on the farms operated. Some of those who did not live on the farms they operated lived on farms operated by others. Where all the land was rented from others or worked on shares for others, the operator was considered to live on the farm operated provided the dwelling he/she occupied was included in the rental agreement. In such cases, the dwelling was not necessarily on the land being operated. Similarly, an operator who did not live on the land being cultivated or grazed, but who had some agricultural operations (other than a home garden) at his/her dwelling, was considered to be living on the farm operated.

- Years on present farm—Operators were classified by years on present farm into four groups. These data were based on the request for the first year the operator took continuous charge of the present farm or any part of it.
- 3. Place of birth—Operators were classified by place of birth according to whether they were born in the Virgin Islands, Puerto Rico, or elsewhere. The purpose of this question was to obtain a measure of the native language abilities of operators as a guide to agricultural agents in preparing news releases for distribution to farmers.
- Age of operator—Operators were classified by age into six groups. The average age was obtained by dividing the sum of the ages of all operators reporting by the number reporting.
- 5. Main occupation—This question was asked to determine whether the principal occupation of the operator was agricultural or nonagricultural. If the operator devoted 50 percent or more of his/her work time to agricultural activities, his/her main occupation was considered to be agriculture.
- 6. Work off farm—The extent to which operators rely on nonfarm sources for part of their income is indicated by the number of days worked off the farm during the year. Work off the farm was defined to include work on someone else's farm for pay as well as all types of nonfarm jobs, businesses, and professions whether the work was done on the farm premises or elsewhere. Exchange work was not included. Data for the 1987 census are comparable with those for the censuses since 1960.

FARM CLASSIFICATIONS

Farms by size—Farms were classified by size on the basis of the total land area established in each one. According to the census definition, a farm is essentially an operating unit, not an ownership tract. All land operated or managed by one person or partnership represents one farm. In the case of tenants, the land assigned to each tenant is considered a separate farm, even though the landlord may consider the entire landholding to be one unit rather than several separate units.

Farms by tenure of operator—In the 1987 census, farms were classified by tenure of operator on the basis of data reported for land owned, rented from others, worked on shares for others, and managed for others. The same classification has been used since 1964. During the processing operations, each report form was coded to indicate whether the operator was a full owner, part owner, manager, or tenant.

Full owners-These operate only land they own.

Part owners—These operate land they own and also land they rent from others.

Managers—These operate land for others and are paid a wage or salary for their services. Caretakers or hired laborers are not classified as managers. If an operator managed land for others and also operated his/her own farm, each operation was considered a farm. If a manager managed farms for two or more employers, each operation was considered a separate farm.

Tenants—These rent from others or work the land they operate on shares for others.

Farms by value of agricultural products sold—The farms were classified on the basis of the total value of agricultural products sold. The total was obtained by adding the reported values of all products sold from the farm. The value of livestock, milk, poultry and eggs, vegetables, fruits and nuts, all field crops, ornamental plants, and all other crops was obtained from the operator at the time of enumeration. The computer edit classified

the value of agricultural products sold into one of the following groups:

| \$100 to \$499 | \$5,000 to \$7,499 |
|--------------------|--------------------|
| \$500 to \$1,199 | \$7,500 to \$9,999 |
| \$1,200 to \$2,499 | \$10,000 or more |
| \$2,500 to \$4,999 | |

Farms by age of operator—Enumerators entered the operator's age, as of his/her last birthday, on the report form. The computer edit classified the operator's age into one of the following age groups:

| Under 25 years | 45 to 54 years |
|----------------|-------------------|
| 25 to 34 years | 55 to 64 years |
| 35 to 44 years | 65 years and over |

RELIABILITY OF DATA

All data compiled in this report originated from a complete enumeration and, therefore, are not subject to sampling variability. However, the data are subject to nonsampling errors. Nonsampling errors can be attributed to many sources: inability to identify all cases in the actual universe; inability or unwillingness on the part of respondents to provide correct information; definition and classification difficulties; differences in the interpretation of questions; errors in recording or coding the data obtained; and other errors of collection, response, coverage, and estimation for missing or misreported data.

The accuracy of these tabulated data is determined by the joint effects of the various nonsampling errors. No direct measures of these effects have been obtained; however, precautionary steps were taken in all phases of data collection, processing, and tabulation of the data in an effort to minimize the effects of nonsampling errors.

APPENDIX B. Selected Data by Current and Prior Farm Definitions: 1987 and 1982

PUBLICATION PROGRAM

1987 CENSUS OF AGRICULTURE

Results of the 1987 Census of Agriculture are being published in a series of reports which provide data for each county (or equivalent), each State, the United States, Puerto Rico, Guam, the Virgin Islands of the United States, American Samoa, and the Northern Mariana Islands. The publications include statistics on the number of farms; land in farms; farm and operator characteristics; livestock, poultry, and their products; crop production and value; operating expenditures; irrigation; and other characteristics of farms.

Publication order forms may be obtained from Data User Services Division, Customer Services, Bureau of the Census, Washington, DC 20233, any U.S. Department of Commerce district office, or by calling (301) 763-1113.

ADVANCE REPORTS (AC87-A-01-000(A) TO 56-000(A)

Advance Reports are published separately for each county (or equivalent) in the United States with 10 farms or more, for each State, and the United States. The reports contain data for all agricultural operations with \$1,000 or more in actual or potential sales of agricultural products in the census year. The Advance Reports contain final data for major data items together with comparable data from the 1982 census. Included in the reports are data on number of farms, land in farms, size of farms, land use practices, farm operator characteristics, sales expenditures, machinery and equipment, livestock, poultry, dairy products sold, and major crops harvested (which vary by State). No advance reports are available for Puerto Rico, Guam, or the U.S. Virgin Islands.

VOLUME 1. GEOGRAPHIC AREA SERIES (AC87-A-1 TO 56)

State and County Data (A-1 to 50) are published showing detailed data in national and State tables for the United States, and in county and State tables separately for each State. These reports include data on number and size of farms; crop production; livestock, poultry, and their products; tenure, age, and occupation of operators; types of organization; value of products sold; and standard industrial classification of farms.

Summary and State Data (A-51)

- Chapter 1. National level data
- Chapter 2. State level data

Outlying Areas (A-52 to 56) provide detailed data for the regions and municipios of Puerto Rico; the election districts of Guam; the U.S. Virgin Islands; American Samoa; and Northern Mariana Islands.

VOLUME 2. SUBJECT SERIES (AC87-S-1 TO 6)

Agricultural Atlas of the United States (AC87-S-1), formerly the *Graphic Summary*, presents a profile of the Nation's agriculture in a series of dot and multicolor pattern maps. The maps provide displays on size and type of farm, land use, farm tenure, market value of products sold, crops harvested, livestock inventories, and other characteristics of farms.

Coverage Evaluation (AC87-S-2) provides national and regional level estimates on the completeness of the census, in terms of both the number of farms missed and selected characteristics of those farms.

Ranking of States and Counties (AC87-S-3) presents the ranking of the top 20 States and the top 100 counties of importance of selected items from the 1987 census. Comparative data from the 1982 census are included in most tables. Tables also show cumulative totals for States and counties.

History (AC87-S-4) is a concise description of the major census operations together with facsimiles of selected data tables. It explains the history of the agriculture census, farm definition, data collection and processing, and dissemination of census data.

Government Payments and Market Value of Agricultural Products Sold (AC87-S-5) shows detailed data for farms cross-tabulated by combined market value of agricultural products sold and Government payments received, including detailed national data and selected data for each State.

ZIP Code Tabulations of Selected Items From the 1987 Census of Agriculture (AC87-S-6) provides tabulations by five-digit ZIP Code for selected items from the 1987 census. Data items include number of farms, land in farms, farms by size, market value of agricultural products sold by size of sale, livestock inventory, cropland harvested, and selected crops.

VOLUME 3. RELATED SURVEYS (AC87-RS-1 AND 2)

The Farm and Ranch Irrigation Survey (AC87-RS-1) provides statistical data collected from a sample of farm operations from the 1987 Census of Agriculture. The publication offers information on acres irrigated, land use, yields of specified crops, methods of water distribution, quantity of water used by its source, and other irrigation practices.

Agricultural Economics and Land Ownership Survey (AC87-RS-2) provides data on indebtedness, expenditures, income and assets for both farm operators and landlords. This report also includes measures of credit used for purchases and expenditures, debt by type of lender, assets, off-farm income, and other land ownership data.

VOLUME 4. CENSUS OF HORTICULTURAL SPECIALTIES (AC87-HOR-1)

This report includes detailed information on the horticultural establishments with production and sales of \$2,000 or more. It provides data on number of establishments, value of sales of horticultural products, type of horticultural products, and kinds of horticultural businesses, for the United States, States, and counties.

ELECTRONIC MEDIA

Flexible Diskette—The Advance Reports of the 1987 Census of Agriculture are available on flexible diskettes. The files can be used with any compatible microcomputer employing the PC-DOS 2.0 or higher operating system. Diskettes can be obtained by calling (301) 763-4100.

Computer Tapes—Public-use computer tapes contain the same summary statistics that are found in the published reports. Two files are available for each State: data for counties and the aggregated State-level data. Order forms may be obtained from the Data User Services Division, Customer Services, Bureau of the Census, Washington, DC 20233 (or call (301) 763-4100).

Compact Disc-Read Only Memory (CD-ROM)— Data for the conterminous United States and Puerto Rico are available on CD-ROM. The CD-ROM can be obtained from the Data User Services Division, Customer Services, Bureau of the Census, Washington, DC 20233 (or call (301) 763-4100).

Online Access— National and State level data from the 1987 Census of Agriculture are available on CENDATA through two information vendors— CompuServe and DIALOG. In addition, the advance reports, highlights of the Subject Series, and Related Surveys reports, are available online from AGRIDATA. For information on these services call (301) 763-4100.
